                                                                                                                                                                                                                                                                                                                               SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: STRONGLY EXPRESSED IN KIDNEY, SKELETAL MUSC
HEART AND PLACENTA.
DISEASE: DEFECTS IN SLC22A5 ARE THE CAUSE OF SYSTEMIC PRIMARY
CARNITINE DEFICIENCY (COSP). CDSP IS AN AUTOSOMAL RECESSIVE
DISORDER OF FATTY ACID OXIDATION CAUSED BY DEFECTIVE CARNITINE
TRANSPORT. PRESENT EARLY IN LIFE WITH HYPOKETOTIC TYPOGLYCEMIA
ACUTE METABOLIC DECOMPENSATION, OR LATER IN LIFE WITH SKELETAL
MYOPATHY OR CARDIOMYOPATHY.
SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY. ORGANIC
CATION SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: SODIUM-ION DEPENDENT, HIGH AFFINITY CARNITINE TRANSPORTER. ALSO TRANSPORTS ORGANIC CATIONS WITHOUT THE INVOLVEMENT OF SODIUM. INVOLVED IN THE ACTIVE CELLULAR UPTAKE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CARNITINE

THIS ISOFORM MAY BE RESPONSIBLE FOR CONSTITUTIVE OR BASAL GLUCOSE UPTAKE. HAS A VERY BROAD SUBSTRATE SPECIFICITY. CAN TRANSPORT A WIDE RANGE OF ALDOSES INCLUDING BOTH PENTOSES AND HEXOSES (BY SIMILARITY).

SUBCELLULAR LOCATION: Integral membrane protein. Localizes primarily at the cell surface (By similarity).

SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY. GLUCOSE
